Crewrite

The smarter way to track and manage crew time

In Engineering and Construction, time tracking is more than just recording hours. It involves managing crews across job sites, handling complex shifts, and ensuring accurate approvals. Manual methods often lead to errors, delayed payroll, and billing setbacks.

Rite's TimeRite simplifies it all. It captures crew time accurately, adjusts for shift differences, and integrates with Oracle Cloud. Built on Oracle PaaS for Oracle Fusion, it streamlines time entry, payroll, and billing in one unified platform.
