Equiprite

Smarter Equipment Management for Engineering & Construction Projects

In industries like E&C, Construction, and Field Services, managing project-critical equipment is a logistical challenge. From tracking asset availability and usage to ensuring timely deployment and accurate billing, traditional methods often lead to underutilization, delays, and cost overruns.

Rite's EquipRite transforms this process—enabling real-time tracking, utilization monitoring, and seamless integration with Oracle Cloud Projects and Financials. From rentals and deployments to returns and costing, EquipRite helps manage the full lifecycle of equipment with greater control and transparency.

Built using Oracle PaaS on Oracle Fusion, EquipRite delivers accurate, audit-ready records and automates billing processes—ensuring field and finance teams work from a single source of truth.

Key Features

Real-Time Equipment Tracking

View live location and status updates for all active equipment deployed across projects.

Utilization & Cost Visibility

Track usage duration, idle time, and chargeable hours to maximize asset value and avoid overbilling.

Integrated with Oracle PaaS

Built for seamless deployment within the Oracle Cloud ecosystem (ERP, PPM, SCM).

Your ERP Transformation Partner
