Procurerite

An easier way to plan, track, and manage project materials in one place

Managing materials for construction projects can quickly get complicated. Different tasks need different materials, multiple POs and requests must be tracked. Also, vendor coordination often happens across emails and calls. When everything is managed in different places, delays and mistakes become common.

ProcureRite brings all procurement steps into one simple system. You can plan materials for each task, share design details with vendors, track orders, schedule inspections, and follow what's been received, all from a single screen. This keeps teams on the same page and helps materials arrive when the project needs them.

Key Features

Task-Based Planning	Live Order Tracking	Item Level Detail	Smooth Oracle Integration
			
Plan and track materials for each project task so nothing is missed.	See the status of every PO in real time so you can act early if something is delayed.	See the movement, cost, and status of each item clearly throughout the project.	Works naturally with your Oracle system so information stays accurate across teams.
