AI APPLICATION

QUERY AND EXPORT VERSION 7.7

CloudMiner

Get more from your Oracle Cloud data.

Getting useful data from Oracle SaaS should not need workarounds, specialist reporting skills or long waits for custom reports. CloudMiner gives functional teams and data professionals a simple, secure workspace to access, query and analyse data across Oracle Fusion Cloud, and now Oracle Database, ATP and MySQL as well.

4	2	6	4×
database families: Fusion, Oracle DB, ATP, MySQL	native platforms: Windows and macOS	months of executed SQL history	default memory, 512 MB to 2 GB

HOW IT WORKS

01 Access data across your Oracle Cloud environments
Without switching between multiple tools.

02 Run ad-hoc queries quickly
Without relying on lengthy custom report development.

03 Work with data directly
And validate your results before using them.

04 Export clean, usable results
In the format your team needs: XLSX, CSV, JSON, HTML, XML, SQL.

05 Reduce dependence on specialist SQL skills
A workspace designed to make data access easier.

NEW SINCE 6.1.0

An expanded workspace, new database connectivity and tools for everyday data work.

Go beyond Fusion
Oracle Database, Autonomous Database (ATP) and MySQL, alongside Oracle Fusion Cloud.

Work with APIs, not just SQL
A REST client for Oracle Fusion APIs in the same workspace.

A modern workspace
Tabbed worksheets, light and dark themes, customisable shortcuts.

Large datasets with confidence
Results load progressively, without waiting for the full set.

Windows and macOS
A native macOS application alongside Windows.

Existing customers upgrade with their current licence key.

PLATFORM APPLICATION

CloudMiner

FEATURES

Everything you need to work with data. In one place.

01

Write and run SQL

Autocomplete, snippets, search, split-screen editing and reusable shortcuts.

02

Explore your data

Browse schemas, tables, views and objects from one workspace, structure and data in detail.

03

Review and work with results

Search, filter and explore results in the grid; stream large result sets.

04

Export your way

Excel, CSV, JSON, HTML, XML and SQL, every row of the query.

05

Keep your work organised

SQL history, background jobs, notifications and built-in Git support.

Less time getting to the data.
More time using it.

SECURITY, GOVERNANCE AND SCALE

- **Secure access**
  Single Sign-On through your enterprise identity, with controlled access.
- **Reliable under load**
  Stable connections, query cancellation and licensing that works on Windows 11 24H2.
- **Work across multiple PODs**
  Multiple Fusion environments and simultaneous sessions from one desktop app.
- **Enterprise-ready productivity**
  Long queries run in the background; SQL history lets teams reuse work.
