

DATA MIGRATION

Convert^{rite}

Move legacy data to Oracle Cloud, cleanly.

Migrating from PeopleSoft, JD Edwards, SAP or EBS to Oracle Cloud should not mean months of scripts, spreadsheets and manual reconciliation. ConvertRite maps, validates, loads and reconciles legacy data into Oracle Fusion, with AI handling the cleansing and mapping and your team keeping the decisions.

40–60%

faster migration cycles

90%

fewer post-load reconciliation issues

250+

pre-built validations

1M+

customer records migrated

HOW IT WORKS

01

Connect to any legacy source

Built-in adaptors for EBS, Sage, Salesforce, CMiC and more.

02

Map source fields to Oracle fields

AI-proposed matches you confirm or correct.

03

Validate before you load

250+ pre-built checks against your Oracle configuration.

04

Load through Oracle-compliant FBDI templates

And promote setups from dev to UAT to prod in one click.

05

Reconcile every load

Variance reports the AI accepts, re-runs or escalates.

WHY CONVERTRITE

ConvertRite reduces migration rework by preparing, validating and reconciling legacy data before and after it reaches Oracle Fusion.

- ✓ Reduce manual migration effort and rework
- ✓ Catch data quality issues before UAT and loading
- ✓ Map legacy fields with AI-assisted recommendations
- ✓ Reuse mappings across migration cycles and instances
- ✓ Improve migration speed and post-load accuracy

WHERE AI HELPS

AI cleanses data before extraction, maps confident field matches and asks about ambiguous ones, then accepts, re-runs or escalates post-load variances.

FEATURES

Everything a migration needs. In one tool.

01

250+ pre-built validations

Built-in logic matches legacy fields to Oracle fields and catches format and lookup errors first.

02

Real-time cloud sync

Updated lookup values in Oracle sync back instantly, so mappings never drift from the target.

03

One-click POD transfers

Promote configurations and mappings from dev to UAT to prod without rebuilding them.

04

Flexible mapping and data hooks

1-to-1, 2-to-1, formula, prefix and suffix mapping, plus custom validations of any length.

05

Reusable mappings and logic

Apply existing mappings across instances and cycles, so each load gets faster than the last.

**Less time fixing data.
More time going live.**

SECURITY, GOVERNANCE AND SCALE

Rite Agent Runtime on OCI

In-tenancy LLM inference on OCI Generative AI; data in OCI Object Storage and ADW.

Oracle security carried through

Fusion RBAC inherited; approval hierarchies and audit trail preserved.

Human-in-the-loop by design

Per-agent autonomy thresholds and named checkpoints decide what the AI does alone.

Proven at scale

17K+ projects, 1M+ customers and 200K AR invoices migrated through ConvertRite.

Secure access

SSO and OAuth keep the environment controlled across internal users and consultants.

Ready to experience ConvertRite?

Bring your legacy landscape. We will scope the migration with you and show ConvertRite running on it.
