

DATA SYNCHRONISATION

riteSync

Keep your data warehouse in sync with Oracle.

Reconciliation and reporting stall when data sits across Oracle Fusion, SaaS platforms and databases with no single, current view. RiteSync extracts and synchronises data from any source into your preferred warehouse, and its AI agents keep the pipelines healthy without someone watching them.

50%

saving on total cost of ownership

10+

pre-built Power BI dashboards

2

connector types built in, REST and JDBC

5+

source types, Fusion SaaS to ATP

HOW IT WORKS

01

Connect any source

SaaS, WMS, Salesforce, Oracle DB and ATP through REST and JDBC connectors.

02

Sync to any destination

Oracle DB, Azure DB, Azure Fabric, CSV or Parquet files.

03

Schedule at module level

So each dataset moves exactly when the business needs it.

04

Monitor every pipeline

From one screen, with real-time alerts when something fails.

05

Report from ready data

10+ pre-built Power BI dashboards on top of the synced warehouse.

WHY RITESYNC

RiteSync gives reconciliation, reporting and data teams a current, connected view without the overhead of manual ETL monitoring.

- ✓ Bring data from diverse enterprise sources into one warehouse
- ✓ Reduce manual reconciliation and pipeline monitoring
- ✓ Move only changed records to reduce latency and bandwidth
- ✓ Detect pipeline issues before they disrupt reporting
- ✓ Lower the total cost of ownership versus custom ETL

WHERE AI HELPS

AI agents decide whether to self-heal a pipeline or hold it and escalate. ML-based prediction adapts sync windows as patterns change.

FEATURES

Everything you need to sync data. In one place.

01

Advanced monitoring

All pipeline activity at a glance, with real-time alerts when a sync needs attention.

02

Seamless integration

REST, JDBC and built-in components, without custom code or manual mapping.

03

Intelligent updates

Move only what changed, keeping synchronisation fast and accurate.

04

Flexible scheduling

Module-level scheduling so each dataset lands when it is needed.

05

Direct data loading

Straight into target databases or file types, with no intermediate steps.

**Less time moving data.
More time using it.**

SECURITY, GOVERNANCE AND SCALE

Rite Agent Runtime on OCI

Pipelines and AI agents run in your OCI tenancy, with data in OCI Object Storage and ADW.

HIPAA-compliant environments

Confidential data stays protected whether hosted in Oracle Cloud or your own data centre.

Human-in-the-loop by design

Autonomy thresholds decide which repairs the agent makes alone and which it escalates.

Pay for use

Usage-based pricing cuts capital expenditure while giving enterprise-grade functionality.

No disruption, full scalability

Works alongside your source systems and grows with data volume. No vendor lock-in.

Ready to experience RiteSync?

Tell us your sources and your warehouse. We will show a live pipeline end to end.
